Problem Statement #06: Alumni Mentorship & Mock Interview Platform

---

1. Requirements Specification Table (Lab 1)

Req ID	Type	Description	Priority	Acceptance Criteria
FR-001	Functional	Recommend verified alumni mentors to student mentees based on domain specialization (e.g., Cloud, Embedded Systems).	**High**	Pass: Verified domain-matched mentors listed with strongest match first. Fail: Unverified or mismatched mentors shown.
FR-002	Functional	Book mock interview session from mentor's published open calendar slots and prevent double-booking.	**High**	Pass: Slot confirmed, added to both schedules, and locked. Fail: Double-booking occurs on same slot.
FR-003	Functional	Allow alumni mentors to create, update, and publish available dates and time slots for mentorship.	Medium	Pass: Published availability appears instantly on student booking interface. Fail: Slots missing or past dates allowed.
FR-004	Functional	Record and submit structured post-interview scorecard using standardized evaluation rubrics.	**High**	Pass: Scorecard with ratings across rubrics saved and mentee notified. Fail: Mandatory rubrics omitted.
FR-005	Functional	Allow platform admin to review and verify alumni profiles and domain qualifications before activation.	Medium	Pass: Profile visible only after admin status marked 'Verified'. Fail: Unverified profile appears in search.
NFR-001	Non-Functional	Restrict access to student evaluation scorecard to student, mentor, and authorized admins (RBAC).	**High**	Pass: Only authorized actors can retrieve scorecard. Fail: Unauthorized user accesses scorecard.
NFR-002	Non-Functional	Return domain-matched mentor search results within 2.0s under peak campus placement load.	Medium	Pass: 95% queries complete in ≤ 2.0s during peak load. Fail: Search latency > 2.0s.

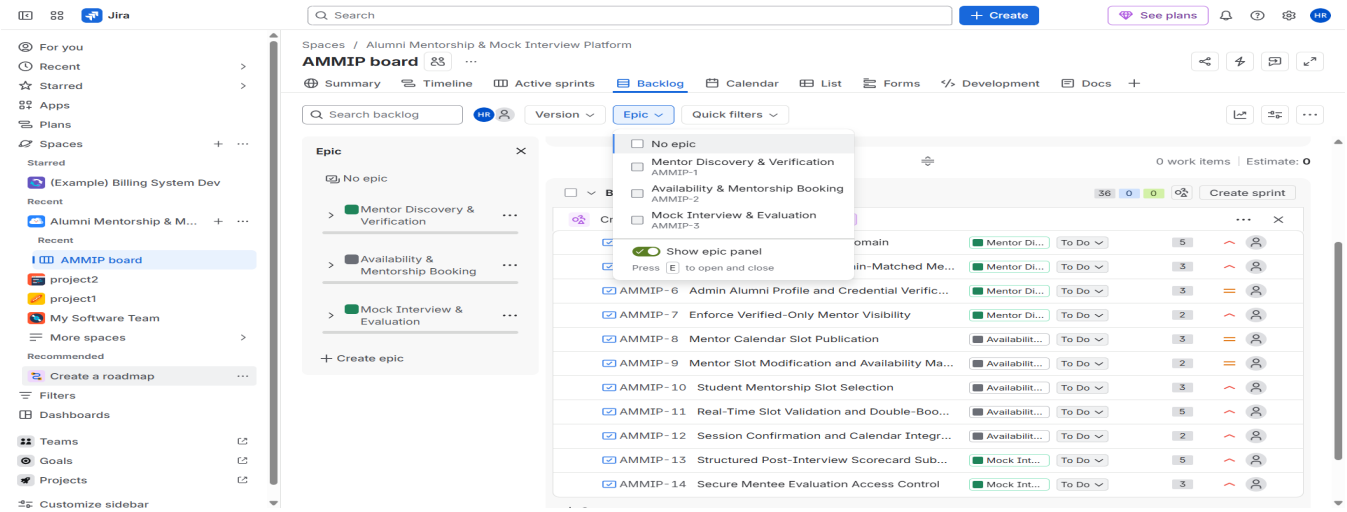

2. UML Use-Case Diagram (Lab 1)

Model Summary: Actors include Student Mentee (Primary), Alumni Mentor (Primary), and Platform Administrator (Secondary). *Mandatory Include:* UC-02 (Book Mentorship Session) «include» UC-07 (Validate Slot Availability) guarantees real-time double-booking prevention.

3. Agile Backlog & Epics in Jira (Lab 2)

The system was organized in Jira (Project Key: **AMMIP**, Board ID: **37**) into 3 Epics and 11 User Stories. Story points were estimated using the Fibonacci sequence, yielding **36 Total Story Points**.

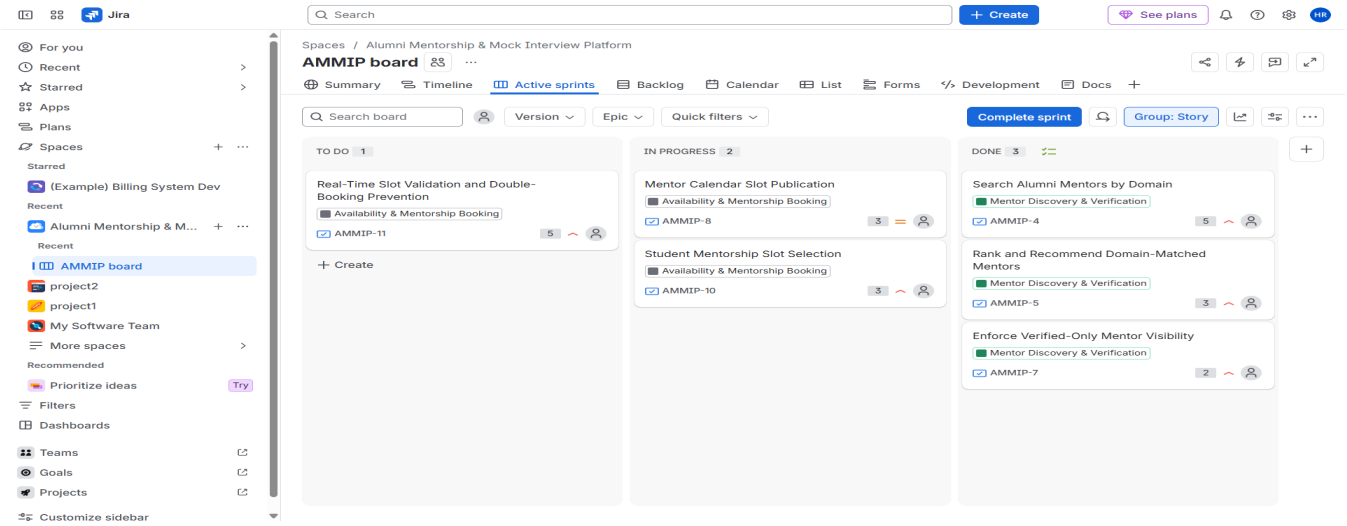

Key	User Story Summary	Epic	SP	Sprint	Status
AMMIP-1	Mentor Discovery & Verification	Epic	-	-	Done
AMMIP-2	Availability & Mentorship Booking	Epic	-	-	Done
AMMIP-3	Mock Interview & Evaluation	Epic	-	-	Done
AMMIP-4	Search Alumni Mentors by Domain	Discovery	5	Sprint 1	Done
AMMIP-5	Rank and Recommend Domain-Matched Mentors	Discovery	3	Sprint 1	Done
AMMIP-6	Admin Alumni Profile and Credential Verification	Discovery	3	Sprint 2	Done
AMMIP-7	Enforce Verified-Only Mentor Visibility	Discovery	2	Sprint 1	Done
AMMIP-8	Mentor Calendar Slot Publication	Booking	3	Sprint 1	Done
AMMIP-9	Mentor Slot Modification & Availability Management	Booking	2	Sprint 2	Done
AMMIP-10	Student Mentorship Slot Selection	Booking	3	Sprint 1	Done
AMMIP-11	Real-Time Slot Validation & Double-Booking Prevention	Booking	5	Sprint 1	Done
AMMIP-12	Session Confirmation & Calendar Integration	Booking	2	Sprint 2	Done
AMMIP-13	Structured Post-Interview Scorecard Submission	Evaluation	5	Sprint 2	Done
AMMIP-14	Secure Mentee Evaluation Access Control	Evaluation	3	Sprint 2	Done

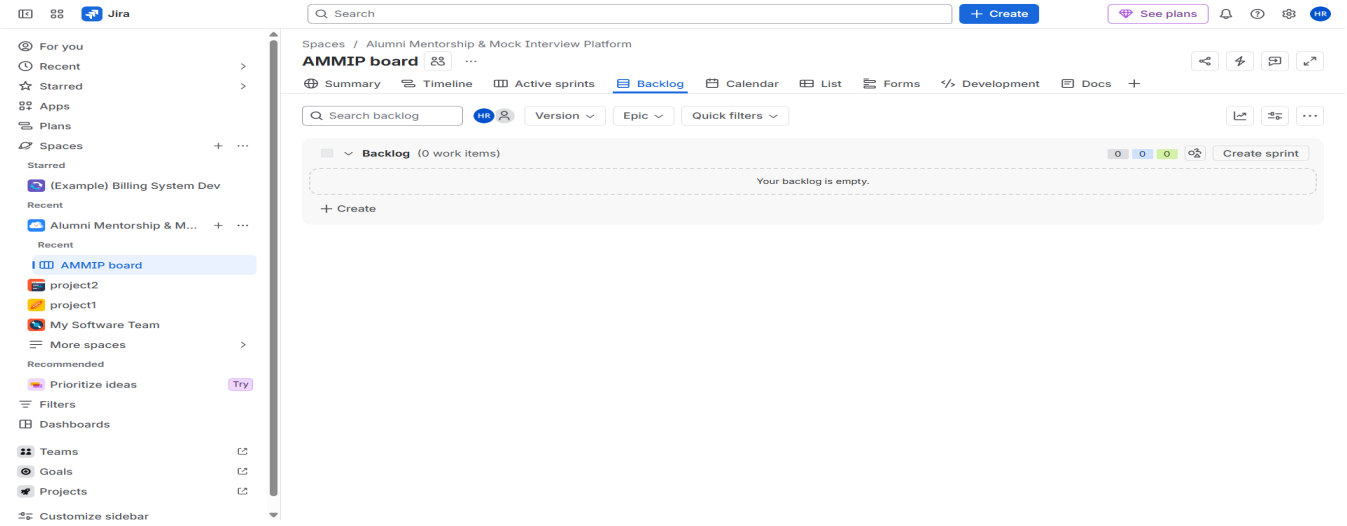

Summary: Sprint 1 = **21 SP** (6 stories) | Sprint 2 = **15 SP** (5 stories) | Total Backlog = **36 SP** (11 stories)

4. Sprint Execution Boards (Active & Completed)

Sprint 1: AMMIP Sprint 1 (21 Story Points - Completed)

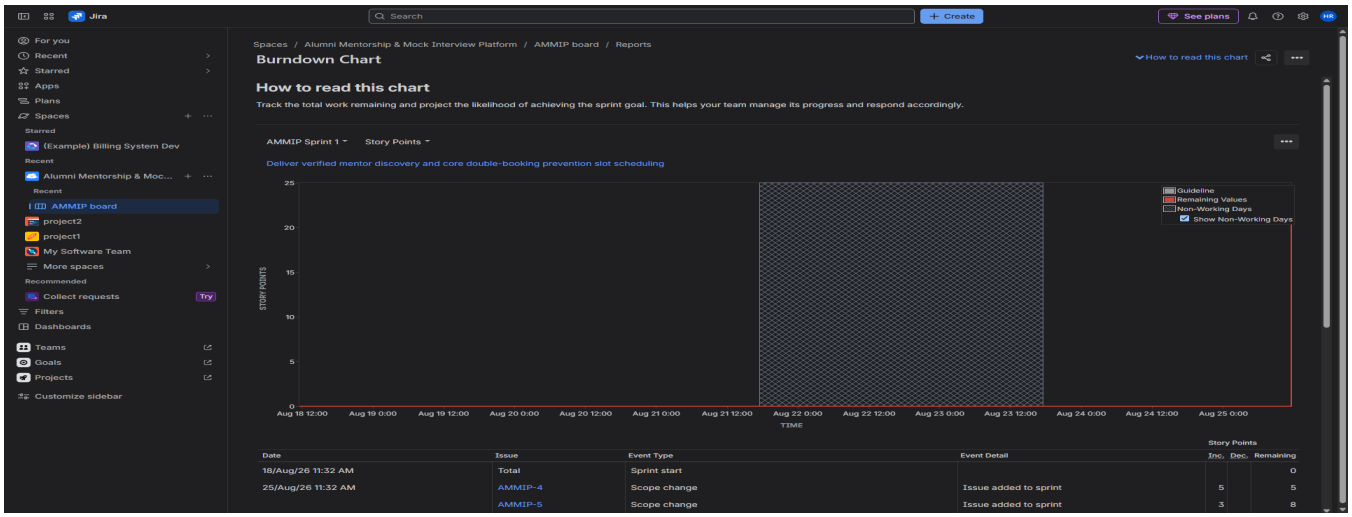

Sprint 2: AMMIP Sprint 2 (15 Story Points - Completed)

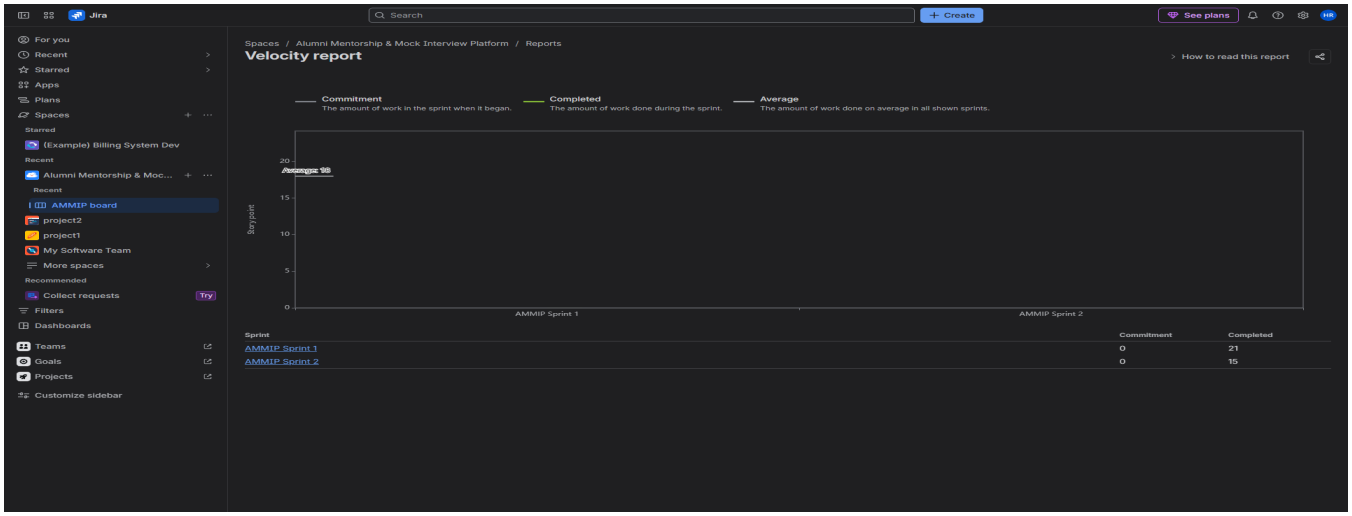

5. Agile Reports & Metrics

Burndown Chart - AMMIP Sprint 1 (21 Story Points)

Velocity Chart - Sprints 1 & 2 Commitment vs Completed

6. Reflection

1. Did your estimations reflect the actual effort?

Yes, mostly. The story points assigned using the Fibonacci sequence (2, 3, 5) closely reflected the relative complexity and effort across our 11 user stories. Lower-point stories like mentor slot modification (AMMIP-9, 2 SP) and session confirmation (AMMIP-12, 2 SP) were straightforward to complete, while higher-point stories like real-time slot validation and double-booking prevention (AMMIP-11, 5 SP) and structured evaluation scorecard submission (AMMIP-13, 5 SP) required significantly more implementation logic and validation. All 36 story points were successfully completed across our planned sprints.

2. Was your backlog well-prioritized?

Yes. High-priority business value stories were scheduled first, such as searching alumni mentors by domain (AMMIP-4), real-time booking validation (AMMIP-11), and mentor credential verification (AMMIP-6). Foundational discovery and calendar slot publication were completed in Sprint 1 (21 SP), while session confirmations, interview scorecard submissions (AMMIP-13), and RBAC mentee evaluation access control (AMMIP-14) were prioritized in Sprint 2 (15 SP) to complete the mentorship lifecycle.

3. How did your simulated sprint align with your plan?

The sprint execution aligned smoothly with our planned backlog. In Sprint 1, we completed all 6 foundational stories (21 Story Points) covering mentor discovery, profile visibility, and slot selection. In Sprint 2, we completed the remaining 5 stories (15 Story Points) covering admin verification, calendar integration, and post-interview evaluation scorecards. All user stories progressed through the workflow from To Do to In Progress and finally to Done.

4. What insights did the burndown chart give about your team's capacity?

The burndown chart shows that all planned work was completed, but because the sprint work was simulated in a short period, most of the reduction occurred at nearly the same time. Therefore, the chart is useful for confirming completion, but it does not provide enough day-by-day data to accurately judge team capacity.
